

AthTek Skype Recorder v6.10 has Been Released! Watermark is supported!

November 29, Development Center of AthTek Software

As we promised, we have just released AthTek Skype Recorder v6.10 which supports to add watermark to the video recordings. This new version is only available for downloading from the [Download Page](#) and [Version Compare Page](#). AthTek Skype Recorder v6.10 doesn't require Skype Desktop APIs anymore and it has removed some functions from AthTek Skype Recorder v6.0. If you have AthTek Skype Recorder v6.0 and don't want to change anything in using, you don't need to download and install the new version 6.10.

What's New?

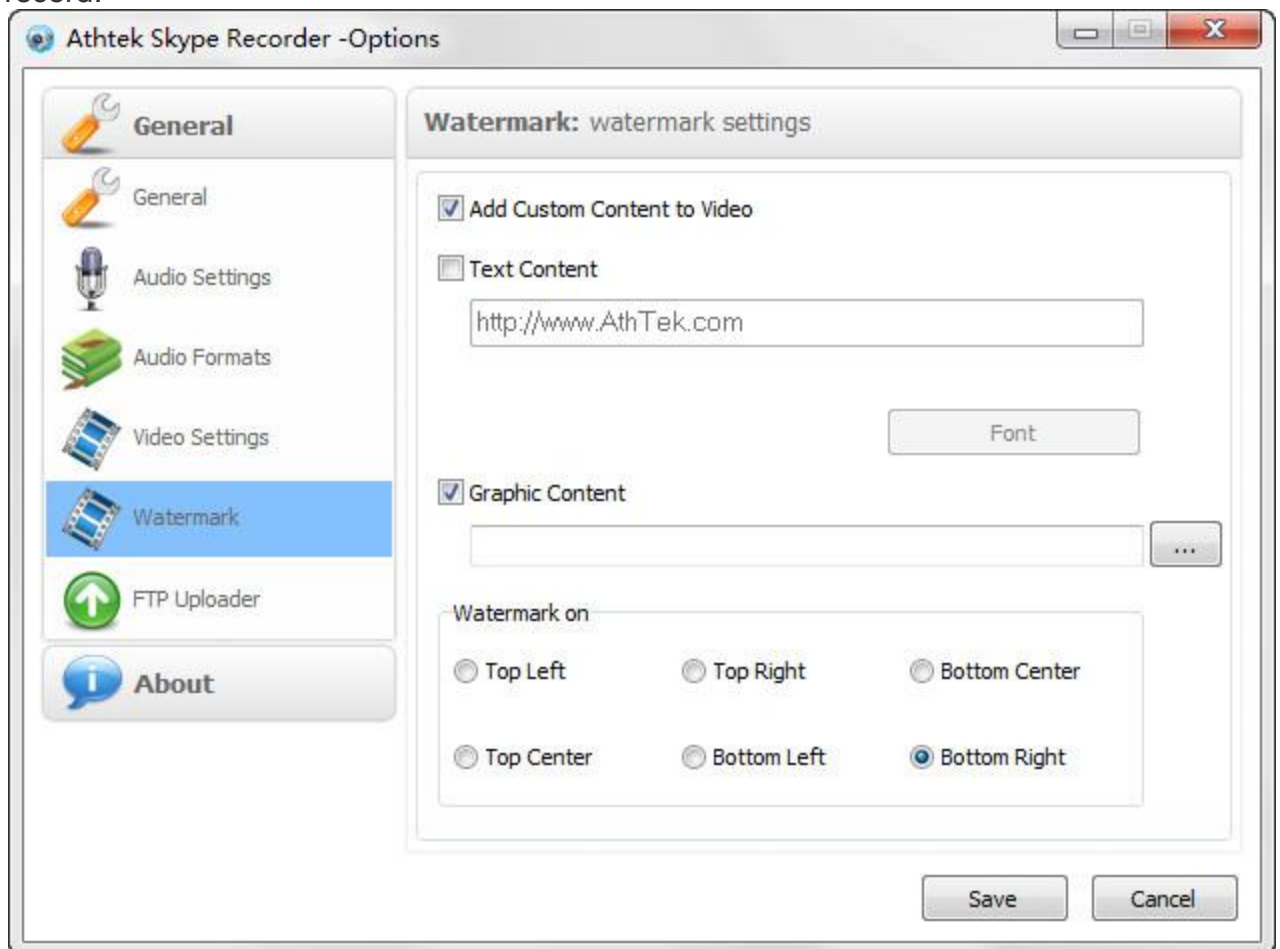

* **This version doesn't require Skype Desktop APIs;**

As we have mentioned before, Skype announced that they will [stop Desktop](#)

APIs which 3rd-party developers used for creating applications. We have to find a way to continue the project of AthTek Skype Recorder. Fortunately, we already found it. Meanwhile, Skype Desktop APIs still exists in Skype v6.8 or older. If you don't want to use this new Skype Recorder, you need to downgrade your Skype to v6.8 and then you would be able to continuously use AthTek Skype Recorder for high quality Skype call recording.

*** Supports to add watermark to video recordings;**

The new version supports to add watermark to the video recordings. You can add text watermark or graphical watermark to the video call you are going to record.

*** Simplify the recording and registration process;**

The new AthTek Skype Recorder doesn't require a Skype connection anymore. If you have ever used the previous version, you would probably know that when you run the Skype recorder for the first time, you will be asked to allow its access

on Skype. When it doesn't require Skype Desktop APIs, it doesn't need to connect Skype anymore.

*** Optimize the translations.**

We have optimized the translations on new AthTek Skype Recorder. For example, "Silent Mode" has been renamed as "Hide Mode". Many ambiguities have been removed from the translation.
