

October 18, 2011 Developer Center of AthTek Software

[AthTek NetWalk](#) v2.1.29 has been released. We have finished to collect the feedback of all our users and integrated some of them into the new version of AthTek NetWalk. We are sure of that it can help you to get better performance in your [packet sniffing](#) tasks.

[Free Download](#)

What's new?

- * Support German dash board;
- * Support to minimize dash board;
- * Enhanced Matrix Map lines.

Please compare AthTek NetWalk to other famous [packet sniffing](#) software, and you will find the [compare results](#) as we listed in our blog.

Thanks to **Dieter Matissek**, he helped us translate AthTek NetWalk into German. That means if you are a German administrator, you can use AthTek NetWalk in [network monitoring](#) with you own language. Mr. Matissek has already received a lifetime free registration key from us, and we still need to translate AthTek NetWalk to other lanuages. If you would like to use our program in your own language, please contact us

and work together with us to translate it to your language. You will receive the lifetime free registration key once you have finished the translation!

Some of users said that the **packet sniffing** software should be able to minimize to system tray automatically. We have included this function into the new AthTek NetWalk. Now you can choose to minimize to system tray automatically when the program starts, or manually minimize as you wish.

Some of users said that they liked the Matrix Map, and would like to view more info from the communication lines. In AthTek NetWalk v2.1.29, we enhanced the Matrix Map lines to include more communication info into those lines.

Want to receive more surprise from the new AthTek NetWalk? [Free download](#) it now and start your new packet sniffing experience!
