

# All-in-One Voice Changer Has Been Launched!

October 11, 2013 | Development Center of AthTek Software

We have launched a new application for Windows, its name is All-in-One Voice Changer. This is the third voice changer of AthTek Software (the first one is [Skype Voice Changer](#), the second one is [Free Voice Changer](#)). It is now available for downloading in our official website and you are allowed to test it in online calls for free.

## [Download and Try All-in-One Voice Changer For Free](#)

All-in-One Voice Changer is based on Skype Voice Changer, thus it has a similar interface to Skype Voice Changer. It can not only change the call voice for Skype, but also for Yahoo Messenger and QQ International. It has an accessible price \$15 for lifetime and the license will be associated to the computer permanently. It supports more IM tools than Skype Voice Changer, but why does it cost so less? Because it cannot send free sound emotions and record the

conversation locally. We priced this product in such a low price in the hope of you will buy Skype Voice Changer as a better choice.

It also includes the functions of our Free Voice Changer which can import an audio file and export it with changed voice pitch. Why people like the voice changers of AthTek? If you have ever tried other voice changers (such as AV Voice Changer), you would probably know that they will replace your original audio drive with AV one. If one day you uninstalled the voice changer, your audio drive will lost and you will have to reinstall the entire OS to recover the audio drive. All-in-One Voice Changer plays exactly as a third-party voice changer on your system, and will never replace your audio drive as others did.
